

Geology Labs

About the Course

Labs/fieldwork are an essential part of science in which students engage with the Things they are reading about and practice the scientific method.

This topic is included in the following course(s): Science: Geology

SAMPLE

Geology Labs

How To Approach Labs

Introduce

- Regardless of how many days are required to complete a particular activity, every Science Lab has the same flow, which follows the scientific method.
- Relevant concept(s) are introduced in the text.
- Your notebook entry begins with the introductory/prelab narration, including relevant information that you have read or previously experienced, what you plan to do in the lab, and any hypothesis or anticipated result.

Lab Procedure

- Perform the procedure according to the instruction, recording in your notebook what you do as it happens. This can be a challenge, but is an extremely important skill.
- Record all data and observations in the lab notebook.

Analysis & Conclusions

- After all data is collected, analyze the results by considering how the data reflects the introduced concepts and whether the hypothesis is supported by the data.
- If the data and observations do not support the hypothesis, reflect on why and what further testing would be interesting or helpful.

Term 1

WEEK 1	60m Geology Labs - Lesson 1 → OBSERVE Begin observations in the field: use your field notebook, collect specimens when allowed, and take pictures where helpful. Begin building a rock, mineral, and/or fossil collection.	
WEEK 2	60m Geology Labs - Lesson 2 → OBSERVE Continue observations in the field. Sketch, describe, and document your local geology.	
WEEK 3	60m Geology Labs - Lesson 3 → OBSERVE Continue observations in the field. Sketch, describe, and document your local geology.
