

Handicrafts

About the Course

We follow Mason's model and do clay modeling every year for one term. We are revamping our clay modeling program with a focus on one hand-building technique per year for younger and inexperienced students and more connections across the curriculum in observation and narration assignments. During the second term, students will learn how to do Sashiko work as they did in Japan and Redwork as was done in the United States and Europe. These are hand-stitching techniques that incorporate different stitches to create beautiful patterns. For the 3rd term, students will learn the art of cloisonné, which regained popularity in the West during that time. Cloisonné is an enameling technique that uses metal strips to create delicate designs.

Handicrafts

Term 1: Clay Modeling

"In the modelling lessons, there should be as little of the routine of ordinary lessons as possible, so that it may be regarded as a recreation and a pleasure, and that each child may be free to do the work by the method he likes best, and to realize the delight of exercising his creative power—a feeling which is strong in all children." A Manual of Clay-Modeling by Hermione Unwin, p.2

Students will explore the slab technique to create a variety of projects. The focus is on fostering creativity, observation, and manual dexterity. Teachers are encouraged to adapt lessons to suit students' needs and may choose to follow the videos closely or develop their own approach. Video tutorials are available; younger students and beginners may require adult supervision. It's recommended to establish lesson structure, cleanup, and storage procedures before starting. Teachers should also review the "Teacher Prep" and dry clay reworking tutorials in the master folder. Clay can be purchased as regular terracotta or buff clay, as opposed to air-dry clay; however, pieces must be fired in a kiln to keep.

The overall purpose of the clay modelling lessons is to encourage observation, hand-eye coordination, and manual dexterity, as well as to develop higher-order thinking processes such as the order of beauty, truth, and likeness. Teachers are encouraged to assign clay modeling throughout the curriculum to give students an opportunity to interact with knowledge in different ways. These assignments can be as simple as creating the characters in their literature or history lessons, which will help them to visualize and solidify what they are learning. Mapwork is a great way to incorporate clay modeling into lessons. Also, students could build the structures they are studying in architecture or history. Creating models of tools, weapons, or clothing can also be a great way to interact with lessons.

Term 2: Sashiko & Red Work

Sashiko is a traditional Japanese embroidery technique that uses simple stitches such as the running stitch to create decorative patterns. This technique uses specialized needles and thread that do not have a sheen like embroidery floss does. The designs are traditionally white thread on indigo fabric. It was the poorer class of Japanese that created and made popular this craft during the Edo period, as they used it to patch worn fabrics beautifully. However, the results were so attractive that when sashiko made a resurgence during the Meiji period, the more wealthy class began purchasing these creations and wearing them proudly. Around the same time, red work became fashionable in the United States and throughout Western countries. This is a similar style of embroidery that also uses simple stitches but leans into the outline stitches, such as the back, stem, chain, and split stitch. These stitches are done with red embroidery thread on white or cream fabric. This was a way to beautifully decorate simple, everyday items.

Students should know that various crafts and trends spread throughout the world, while being adapted regionally, due to higher levels of global trading and travel. These crafts go along with the history rotation for the 2026/2027 school year. Students will create a few projects in each craft and be challenged to create beautiful objects to share with others.

Term 3: Cloisonné

Cloisonné is an ancient art form where artists traditionally solder gold or silver wire to a base and fill it with fine ground glass enamel. Students will have an opportunity to practice a variation of this craft by gluing wire to a base and filling the spaces with fine colored sand. Students will start by learning to bend wire and glue it into preferred shapes and lines. They will

progress from there with projects that will increase in difficulty. Younger students will need teacher supervision as the wire can be somewhat difficult to bend and the glue, though non-toxic, needs to be controlled.

Planning & Prep

Permission to print for non-commercial use. See Alveary group use policy to use lessons in a group context.

LINKS: Click text or scan the QR code in the top corner of the lesson plan pages to view online resources associated with the lessons.

Responsibility for previewing all links rests with the teacher. All links were checked at the time of publication; however, websites change frequently and may contain objectionable content. Please report broken links by contacting us through our website.

Handicrafts

To prep for Term 1, have supplies ready. Younger students may need assistance wedging clay, or getting started with their project. A slow and steady pace is encouraged as they complete their projects.

Video tutorials are provided to introduce new concepts as the lessons progress. This will be referred to in the lessons - optionally - can be watched by the teacher ahead of time to familiarize yourself with the goal of the project.

Sashiko & Red Work: Read through the history of both to familiarize yourself with the crafts and preread the sites students will see. There are websites linked to the first and sixth lessons. Teachers can share this information "by the way" or allow students to directly interact with the websites. It is helpful to allow students to see images of completed work so that they will have an idea in mind.

Cloisonne: Tutorial videos will be provided for each new lesson introduction. Teachers can watch these videos and teach the students or allow the students to interact directly with the videos. Please preview any websites that are linked before allowing students to access them.

Term Prep & Teacher Tips

Handicrafts

Term 3 (Optional): Visit the Cloisonne kit website below in the Quick Links, and instead of working on the term's projects, students can work at their own pace and choose any beginner kit.

How To Teach

Prepare

Look through the term's lessons and tutorials and decide which projects you will try with your students. Projects will last 1-3 weeks. It is always beneficial to teach yourself first before teaching your students. Not only will you be confident in your directions, but you will also have an example the students can see, touch, and refer to often.

Introduce

Show your students examples of completed projects.

Practice

Work through projects with your students, assisting younger children as needed.

Discuss

Let students share any thoughts or connections they have about the lesson.

Term 1

WEEK 1 ☐ 20m Handicrafts - Lesson 1

Clay Modelling- Creating a Slab Dish

☐ Materials: air dry clay, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface, and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Teachers should watch the Teacher Prep tutorial before getting started with the term

∞ Video Link: Teacher Prep for Clay Modelling
Gather all necessary supplies.

→ NOTE

Students will be working from a slab each week which will require rolling out a particular size, shape and thickness. They may need help at first learning how to measure these aspects with a ruler until they get to the preferred size. Projects may need to be wrapped up and finished during afternoon occupations or free time but will depend upon the student.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Project #1 Slab Dish

- Begin by wedging your clay into a grapefruit sized lump. Beginning with a ball is best when rolling a slab.
- Pick up your clay ball and drop it from a reasonable height onto the table, putting a little force behind it (as you saw in the tutorial). Pick it up, flip it over and do it on the other side. Do this a few times flipping the clay back and forth. This helps the clay to begin to flatten out.
- Check the thickness of your clay at this point. You want it to be between 1.25" and 1.5" thick. If it is not yet there, begin rolling it out evenly as you saw in the tutorial. If it is already there, use your hands to begin shaping it into a square. You can tap it on the table as you saw in the tutorial as well.
- Continue to shape your clay into a 4" square slab that is between 1.25" and 1.5" thick.
- Once you have the correct sized slab, draw a 3" square centered on the slab with a tool or pencil.
- Determine how far down from the surface you will need to go to dig out 3/4". You should place a mark on the side to remind you not to go deeper. Follow what you saw in the tutorial.
- Use your ribbon tool to begin removing the clay inside that 3" square. You only want it to be 3/4" deep.
- Smooth out the inside and the remaining top edge with a silicone or wooden rib.
- Once it is smooth, use a damp -not dripping sponge to smooth again and to remove all of the crumbs of clay(which you will gather and keep).
- Set your project aside to dry.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight container or plastic bag if you did not finish during class time.
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week, you can mix a little water in, to create slip.

TEACHER NOTE: Please make sure you read "About the Course" so you have a better understanding of the purpose of clay modelling and some of the changes we made.

Term 1

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 2 20m Handicrafts - Lesson 2

Clay Modelling- Bas Relief

Materials: a coin- nickle, dime, quarter, etc., air dry clay, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Cut a slab of clay a little less than the size of a grapefruit for your student to begin with. (Less clay than last lesson.)

Gather all necessary supplies.

→ NOTE

- Students may need something to trace around or to look at for inspiration for today's project. Examples may be, but are not limited to: a tennis racket, a flower, a vase, a fish, a tree, a bicycle, a game console, etc.

- Students will be working from a slab each week, which will require rolling out a particular size, shape, and thickness. They may need help at first learning to measure these aspects with a ruler until they reach the preferred size. Projects may need to be wrapped up and finished during afternoon occupations or free time, but will depend upon the student.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Bas Relief Tutorial

∞ Link: Bas Relief Examples

- Follow the first four steps from our last lesson to get the proper slab. Your slab only needs to be between 3/4" and 1" thick.
- Look at a quarter, nickel, or dime. Notice how the objects stand out from the surface and yet are smooth. This is what we are aiming for.
- Looking at the object you have chosen to render, either trace or draw it onto the surface of your slab.
- Use a clay tool to slowly and carefully remove the clay around the outside of your object. Determine if you will remove the clay all the way to the edges of your slab or if you will allow for a frame around the edge.
- Do not go more than 1/2" down. Remember, this is a bas relief, and you only want your objects to be less than halfway protruding from the base surface.
- Now that you have removed the clay around the outside of the object, determine what clay needs to be removed to add details to your object. For example, my flower petals reveal layers and depth in my flower.
- When you have finished with your object and are satisfied, use your finger, a tool, or a damp sponge to smooth out the entire slab. Look back at the linked examples and notice how smooth the reliefs are.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week, you can mix a little water in to create slip.

→ NOTE

Term 1

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air tight container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 3 20m Handicrafts - Lesson 3

Clay Modelling - High Relief

Materials: air dry clay, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

→ NOTE

- Students may need something to trace around or to look at for inspiration for today's project. Examples may be, but are not limited to: a tennis racket, a flower, a vase, a fish, a tree, a bicycle, a game console, etc.

- Students will be working from a slab each week, which will require rolling out a particular size, shape, and thickness. They may need help at first learning to measure these aspects with a ruler until they reach the preferred size. Projects may need to be wrapped up and finished during afternoon occupations or free time, but will depend upon the student.

PREP: Cut a slab of clay grapefruit-sized for your student to begin with. Gather all necessary supplies.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Project #3 High Relief

∞ Link: The Angel of Death and the Sculptor from the Milmore Memorial

∞ Link: High Relief Example

- Follow the first four steps from our first lesson to get the proper slab. You want a 4" square that is 1.25-1.5" deep.
- Looking at the object you have chosen to render, either trace or draw it onto the surface of your slab.
- Use a clay tool to slowly and carefully remove the clay around the outside of your object. Determine if you will remove the clay all the way to the edges of your slab or if you will allow for a frame around the edge.
- You are creating a high relief this time. Look back at the examples again and notice how far the objects protrude from the surface. Be careful not to push so far that you cut away your object nor go through your slab completely. The object needs to remain anchored to your slab.
- Now that you have removed the clay around the outside of the object, determine what clay needs to be removed to add details on your object.
- When you have finished with your object and are satisfied, use your finger, a tool or a damp sponge to smooth out the entire slab. Look back at the linked examples and notice how smooth the reliefs are.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week you can mix a little water in to create slip.

Term 1

→ NOTE

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 4 20m Handicrafts - Lesson 4

Clay Modelling- Additive Slab Sculpture

Materials: air dry clay, slip (the crumbs they have been saving each week from their work saturated with water), sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Cut a slab of clay grapefruit-sized for your student to begin with. Your students will also need more clay to add to their slab, but it will depend on the student and the object they choose to render. Gather all necessary supplies.

→ NOTE

Students will be working from a slab each week which will require rolling out a particular size, shape and thickness. They may need help at first learning how to measure these aspects with a ruler until they get to the preferred size. Projects may need to be wrapped up and finished during afternoon occupations or free time but will depend upon the student.

→ PRACTICE

Watch the tutorial video.

- ∞ Video Link: Project #4 Additive Relief
- ∞ Link: Relief Tile- Sarah Western
- ∞ Link: Additive Slab Sculpture Example

- Follow the first four steps from our first lesson in order to get the proper slab. You want a 4" square that is 3/4-1" deep.
- Looking at the object you have chosen to render, either trace or draw it onto the surface of your slab. This will help you to determine where everything will go on your slab. It is the planning phase.
- For this project you will be adding clay to your slab to create a sculpture. You will need to score and slip every single piece. If you do not, your clay will fall apart when drying. (You can use craft glue to glue on dried essential pieces.)
- Your object can protrude as far off the surface as you prefer.
- Once you have added all of your pieces for your object, smooth all of the seams as you saw in the tutorial video.
- When you have finished with your object and are satisfied, use your finger, a tool or a damp sponge to smooth out the entire slab. Look back at the linked examples and notice the craftsmanship of the artwork.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week you can mix a little water in to create slip.

→ NOTE

At the end of your lesson time, wrap a damp, but not dripping wet, cloth

Assign students a bas relief sculpture project in their literature or history this week.

Term 1

or paper towel around your work in progress and store it in an air tight container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 5 20m Handicrafts - Lesson 5

Clay Modelling- Hanging Slabs

□ Materials: natural objects such as seeds, feathers, flowers, leaves, sticks, shells, etc., plastic drinking straw (any size), yarn or string, beads (optional), air dry clay, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Students will need the same amount of clay as in the last lesson, divided into three equal parts.
Gather all necessary supplies.

→ NOTE

Students will be working from a slab each week, which will require rolling out a particular size, shape, and thickness. They may need help at first, learning to measure these aspects with a ruler until they reach the preferred size. Projects may need to be wrapped up and finished during afternoon occupations or free time, but will depend upon the student.

→ PRACTICE

Watch the tutorial video.

- ∞ Video Link: Project #5 Hanging Slabs
- ∞ Link: Hanging Slab Example #1
- ∞ Link: Hanging Slab Example #2
- ∞ Link: Hanging Slab Example #3

- Follow the first four steps from our first lesson to get the proper slab. You want 3-2" squares that are about 1/2" deep.
- Choose several natural objects such as feathers, leaves, pine needles, grasses, flowers, pine cones, seeds, etc.
- Smooth out your clay slabs as you normally do at the end, before pressing the objects into them. Finish the edges as you will want them to be, whether you want them straight and smooth or wavy, etc.
- Lay your chosen objects on top of your slabs in a pleasing arrangement.
- Use your rolling pin to roll over the top of the objects, putting a small amount of pressure on them.
- Carefully peel your natural objects off of your clay and reuse them on the next slab or discard them.
- When you have finished with your object and are satisfied, use your finger, a tool, or a damp sponge to smooth away crumbs on the slab. Look back at the linked examples and notice the craftsmanship of the artwork.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week, you can mix a little water in to create slip.

→ NOTE

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight

Term 1

container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 6 20m Handicrafts - Lesson 6

Clay Modelling - Creating a Slab Cylinder

Materials: cardboard or plastic tubes of any thickness (optional), air dry clay, slip, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Cut two slabs of clay- a grapefruit and golf ball-sized for your student to begin with.

Gather all necessary supplies. The cardboard or plastic tubes can be used for students who may need an armature to build their cylinders around. If it is a hard plastic, wrap it with plastic wrap or a plastic grocery bag before adding clay to it so that it will release once the clay dries. Do not let the clay dry completely before removing, but only to leather hard.

→ NOTE

The cardboard or plastic tubes can be used for students who may need an armature to build their cylinders around. If it is a hard plastic, wrap it with plastic wrap or a plastic grocery bag before adding clay to it so that it will release once the clay dries. Do not let the clay dry completely before removing, but only to leather hard. (You could also use a soda or soup can as an armature, but be sure to wrap it in plastic.)

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Project #6 Slab Cylinder

∞ Link: Slab Cylinder Examples (These cylinders have been pressed with textures just like in the lesson last week. If you desire to do that, press the textures into the slab before forming the tube.)

- Follow the first four steps from our first lesson to get the proper slab. You want a 1- 3" circle that is 1/4" thick and a 1- 6" slab that is 1/4" thick.
- Smooth out your clay slabs as you normally do at the end, before building your cylinder.
- Allow your circle slab to sit out and dry while you are building your cylinder. (You do not want it to dry completely before using it.)
- Roll your cylinder. You may need to use an armature to help with the structure. See NOTE above.
- Overlap the ends and mark how far you will need to score for each overlap. Then score with a tool.
- Add a slip to the score marks on one side and join the sides together.
- Once the seam is well established, smooth the inside and the outside of the cylinder.

→ NOTE

- Keep a hand on the inside of the cylinder/tube as you are smoothing to keep your cylinder from collapsing. Do the same on the outside when you are smoothing the inside in order to keep the cylinder from bulging out.
- Score around the top edge of the circle slab and score the bottom edge of the cylinder where the two pieces will meet.
- Add slip to the score marks and press the cylinder onto the circle slab carefully but with some pressure. You should be able to lift the cylinder and have the base stay attached at this point.

Assign students a bas or high relief sculpture in science. Allow them to visualize a scientific concept that they are studying and to create it in clay.

Term 1

- Smooth out this seam. Use a long tool to smooth the inside seam.
- Add decoration to the surface if you did not press a texture in before beginning to build.
- When you have finished with your object and are satisfied, use your finger, a tool, or a damp sponge to smooth out the cylinder. Look back at the linked examples and notice the craftsmanship of the artwork.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week, you can mix a little water in to create slip.

→ NOTE

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 7 20m Handicrafts - Lesson 7

Clay Modelling- Creating a Slab Cylinder #2

Materials: air dry clay, slip, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ NOTE

Students will be working from a slab each week, which will require rolling out a particular size, shape, and thickness. They may need help at first, learning to measure these aspects with a ruler until they reach the preferred size. Projects may need to be wrapped up and finished during afternoon occupations or free time, but will depend upon the student.

→ PRACTICE

- There is no tutorial video for this lesson. Students are to create another slab cylinder vessel like the one in the last lesson. Their slabs and cylinder vessels can be any size they would like.
- If you did not add a surface texture before building your last slab cylinder, try it this time.
- Don't forget to score and slip and smooth your seams.
- Add decoration to the surface if you did not press a texture in before beginning to build.
- When you have finished with your object and are satisfied, use your finger, a tool, or a damp sponge to smooth out your cylinder. Look back at the linked examples and notice the artwork's craftsmanship.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week, you can mix a little water in to create slip.

→ NOTE

Term 1

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 8 20m Handicrafts - Lesson 8

Clay Modelling- Slab Hump Vessel

Materials: a ball or balloon at least 4" in diameter, plastic wrap (or plastic grocery bag), air dry clay, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

Teachers should cut a grapefruit-sized slab for students to roll out for a slab.

→ NOTE

Students will be working from a slab each week, which will require rolling out a particular size, shape, and thickness. They may need help at first, learning to measure these aspects with a ruler until they reach the preferred size. Projects may need to be wrapped up and finished during afternoon occupations or free time, but will depend upon the student.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Project #7 Slump & Hump Molds

∞ Link: Slab Hump Vessel Example #1

∞ Link: Slab Hump Vessel Example #2

- Wrap your hump mold with plastic wrap. You may need to tape the plastic wrap on. Do this on the flip side of the mold where your clay will not be.
- Place the ball or balloon in a cup, can, or another bowl to hold it still while using it.
- Roll out your slab to be large enough to fit a little less than halfway over the mold. You want your slab to be at least 1/4" thick.
- Smooth your slab completely with your silicone or wooden rib.
- Lay the slab over your mold. Tap it down lightly with an open hand as you turn the mold around, as you saw in the tutorial.
- You can add feet by making three little pieces- all the same size, and scoring and slipping them onto the exposed side of the slab. You can also roll a coil for the foot. Score and slip it on. Be sure to smooth out your seams.
- Cover your slab loosely with plastic and allow it to dry for 24-48 hours. It should dry slowly so that it does not crack. Check on it from time to time to make sure it is not drying unevenly. If you find that it is, you can mist-spray the areas that are drying faster. Just dampen them, do not drench them.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week, you can mix a little water in to create slip.

Assign your students a bas relief for map work in geography.

Term 1

→ NOTE

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 9 20m Handicrafts - Lesson 9

Clay Modelling- Catch-up or Create a Slab Project of Your Choice

Materials: air dry clay, slip, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ PRACTICE

Make another of your favorite slab projects or finish the surfaces of previous projects with acrylic paint. Be sure to spray your dried clay project with a finish before applying paint. If you use a brushed finish or fail to apply a spray finish, then your paint will likely peel off while you are applying it or after it dries.

- Don't forget to score and slip and smooth your seams.
- Add decoration to the surface if you did not press a texture in before beginning to build.
- When you have finished with your object and are satisfied, use your finger, a tool or a damp sponge to smooth out your cylinder. Look back at the linked examples and notice the craftsmanship of the artwork.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week, you can mix a little water in to create slip.

→ NOTE

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 10 20m Handicrafts - Lesson 10

Clay Modelling- Catch-up or Create a Slab Project of Your Choice

Materials: air dry clay, slip, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ PRACTICE

Assign your students a slab built model in architecture or history. This will help them to visualize the significant details of architecture.

Term 1

Make another of your favorite slab projects or finish the surfaces of previous projects with acrylic paint. Be sure to spray your dried clay project with a finish before applying paint. If you use a brushed finish or fail to apply a spray finish, then your paint will likely peel off while you are applying it or after it dries.

- Don't forget to score and slip and smooth your seams.
- Add decoration to the surface if you did not press a texture in before beginning to build.
- When you have finished with your object and are satisfied, use your finger, a tool, or a damp sponge to smooth out your cylinder. Look back at the linked examples and notice the craftsmanship of the artwork.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed. Keep your clay crumbs in an old yogurt or cottage cheese cup. Each week, you can mix a little water in to create slip.

→ NOTE

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight container or plastic bag if you did not finish during class time.

How is your modeling going so far? Are you investing effort into your craftsmanship?

WEEK 11 20m Handicrafts - Lesson 11

Clay Modelling- Catch-up or Create a Slab Project of Your Choice

Materials: air dry clay, slip, sponge, water, work surface, table cloth or other surface covering, clay tools, air tight container or plastic bag to store clay projects in from week to week, paper towel or cloth for cleaning hands, surface and wrapping damp around projects still in progress at the end of lesson time, rolling pin, ruler, spray bottle (for misting clay as you work), Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ PRACTICE

Make another of your favorite slab projects or finish the surfaces of previous projects with acrylic paint. Be sure to spray your dried clay project with a finish before applying paint. If you use a brushed finish or fail to apply a spray finish, your paint will likely peel off while you apply it or after it dries.

- Don't forget to score and slip and smooth your seams.
- Add decoration to the surface if you did not press a texture in before beginning to build.
- When you have finished with your object and are satisfied, use your finger, a tool, or a damp sponge to smooth out your cylinder. Look back at the linked examples and notice the artwork's craftsmanship.
- After 24-48 hours of drying, take your clay outside to spray with a satin finish. Let it sit for 24 hours, and then you can apply acrylic paint if you desire to add color. You can spray it again after painting. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)

At the end of your lesson time, wrap a damp, but not dripping wet, cloth or paper towel around your work in progress and store it in an air-tight

Term 1	
container or plastic bag if you did not finish during class time. How is your modeling going so far? Are you investing effort into your craftsmanship?	
WEEK 12  20m Handicrafts - Lesson 12 <i>Exam Week</i> → EXAMS Answer question(s) related to the course. Questions will come from: Handicrafts: Clay Modeling	

Term 2

WEEK 1 20m Handicrafts - Lesson 13

Sashiko- Introduction to Sashiko

Materials: The Ultimate Sashiko Sourcebook by Susan Briscoe (optional), white sashiko thread, chambray fabric, sashiko needles, sashiko pattern templates, pattern pen or pencil, scissors, embroidery hoop

→ NOTE

You can also freehand patterns based on the patterns on p.61-91 and 97-109 in The Ultimate Sashiko Sourcebook by Susan Briscoe. You can also search for sashiko patterns online.

∞ Link: Free Sashiko Patterns

PREP: Sashiko is a traditional Japanese sewing craft based on the running stitch. Students will need to be taught the running stitch before beginning their sashiko projects if they do not already know this skill. It is a good idea, especially for younger students and those with little to no prior sewing experience, to use the recommended pattern templates because they will mark the spacing and size of stitches. This will lead to more student success.

Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

→ READ

Read about Sashiko history on p.8-15 in The Ultimate Sashiko Sourcebook by Susan Briscoe. Option to read a little online about Sashiko.

∞ Link: The History of Sashiko

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Sashiko Supplies

∞ Video Link: How to Work With a Template

∞ Video Link: Getting Started With a Running Stitch

- Look through the templates that you have. Decide which pattern you will begin with.
- Cut your chambray fabric large enough to stretch over your embroidery hoop.
- Trace your sashiko pattern onto the center of your fabric.
- Stretch your fabric over your hoop.
- Thread your needle with string.
- Store your needle in the fabric outside of the hoop. You are ready to begin working on the next lesson.
- Clean up your work area as your teacher has instructed.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 2 20m Handicrafts - Lesson 14

Sashiko- Sashiko Project #1

Materials: The Ultimate Sashiko Sourcebook by Susan Briscoe (optional), white sashiko thread, chambrey fabric, sashiko needles, sashiko pattern templates, pattern pen or pencil, scissors, embroidery hoop

PREP: Gather all necessary supplies.

Term 2

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

→ READ

Read about right and wrong stitches on p.25 in The Ultimate Sashiko Sourcebook by Susan Briscoe if you have it.

→ PRACTICE

- You will be using the running stitch to complete your sashiko pattern.
- Continue stitching your sashiko pattern until you have completed it. Replenish your thread as needed.
- Once you get to the end of your class time store your needle in the fabric outside of the hoop. You are ready to begin working next lesson.
- Clean up your work area as your teacher has instructed.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 3 20m Handicrafts - Lesson 15

Sashiko- Finish Project #1

Materials: The Ultimate Sashiko Sourcebook by Susan Briscoe (optional), white sashiko thread, chambray fabric, sashiko needles, sashiko pattern templates, pattern pen or pencil, scissors, embroidery hoop

PREP: Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

→ PRACTICE

- Finish stitching your sashiko pattern. Replenish your thread as needed.
- Clean up your work area as your teacher has instructed.
- If you finish before the class time is up. Decide on your next pattern.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 4 20m Handicrafts - Lesson 16

Sashiko- Sashiko Project #2

Materials: The Ultimate Sashiko Sourcebook by Susan Briscoe (optional), white sashiko thread, chambray fabric, sashiko needles, sashiko pattern templates, pattern pen or pencil, scissors, embroidery hoop

→ NOTE

You can also free hand patterns based on the patterns on p.61-91 and 97-109 in The Ultimate Sashiko Sourcebook by Susan Briscoe or find patterns online.

PREP: Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

Sashiko patterns can be used to add decoration to any sewing projects; such as quilts, pillows, fabric coasters, etc. They can also be used to patch holes in fabrics.

Term 2

→ PRACTICE

- Begin your second Sashiko project.
- Look through the templates that you have. Decide which pattern you will begin with.
- Cut your chambray fabric large enough to stretch over your embroidery hoop. Alternatively, you could do this project on a pair of jeans or a denim jacket or even on a pair of canvas shoes.
- Trace your sashiko pattern onto the center of your fabric.
- Stretch your fabric over your hoop.
- Thread your needle with string.
- Use the running stitch to work on your pattern.
- Store your needle in the fabric outside of the hoop. You are ready to begin working next lesson.
- Clean up your work area as your teacher has instructed.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 5 20m Handicrafts - Lesson 17

Sashiko- Finish Sashiko Pattern #2

Materials: The Ultimate Sashiko Sourcebook by Susan Briscoe (optional), white sashiko thread, chambray fabric, sashiko needles, sashiko pattern templates, pattern pen or pencil, scissors, embroidery hoop

PREP: Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

→ PRACTICE

- Finish stitching your sashiko pattern. Replenish your thread as needed.
- Clean up your work area as your teacher has instructed.
- If you finish before the class time is up. Decide on your next pattern.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 6 20m Handicrafts - Lesson 18

Red Work- Introduction to Red Work

Materials: red embroidery thread, white or cream fabric, needles, red work pattern templates, pattern pen or pencil, scissors, embroidery hoop

PREP: Red Work is a traditional western sewing craft. Though there are modern variations, red work depends on red embroidery thread and cream or white cotton or linen fabric- think tea towels or throw pillow cases. The stitches are based on traditional embroidery outline stitches such as the back, stem, split and chain stitch. Students will need to know at least one of these stitches in order to accomplish the patterns. Red Work was popular in the West while Sashiko was popular in Japan. The purpose of studying both in one term is to help students understand that similar things developed around the globe at the same time. These two sewing crafts happened in the time of our history rotation this school year. Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their

Term 2

hoop.

There are a ton of free patterns on the linked website but you could also use coloring book outlines or find your preferred patterns online. There is a demo on the instructional tutorial of how to trace patterns from the computer screen. Alternatively, you can print them, tape them to a window and place your fabric on top to trace.

→ READ

Read about the History of Red Work on this website.

∞ Link: Embroidery Legacy

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Introduction to Red Work

- Look through the templates on DMC Free Patterns. Decide which pattern you will begin with.
∞ Link: DMC Free Patterns
- Cut your fabric large enough to stretch over your embroidery hoop.
- Trace your red work pattern onto the center of your fabric.
- Stretch your fabric over your hoop.
- Thread your needle with string.
- Store your needle in the fabric outside of the hoop. You are ready to begin working next lesson.
- Clean up your work area as your teacher has instructed.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 7 20m Handicrafts - Lesson 19

Red Work -Project #1

□ Materials: red embroidery thread, white or cream fabric, needles, red work pattern templates, pattern pen or pencil, scissors, embroidery hoop

PREP: Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

→ VIEW

If you need help knowing how to do more Redwork stitches, watch these videos.

∞ Video Link: Stem Stitch

∞ Video Link: Split Stitch

∞ Video Link: Chain Stitch

∞ Video Link: Back Stitch

→ PRACTICE

- You will be using outline stitches to complete your red work pattern.
- Continue stitching your red work pattern until you have completed it. Replenish your thread as needed.
- Once you get to the end of your class time, store your needle in the fabric outside of the hoop. You are ready to begin working next lesson.
- Clean up your work area as your teacher has instructed.

How is your work going so far? Are you investing effort into your craftsmanship?

Term 2

WEEK 8 ☐ 20m Handicrafts - Lesson 20

Red Work- Finish Project #1

☐ Materials: red embroidery thread, white or cream fabric, needles, red work pattern templates, pattern pen or pencil, scissors, embroidery hoop

PREP: Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

→ PRACTICE

- Finish stitching your red work pattern. Replenish your thread as needed.
- Clean up your work area as your teacher has instructed.
- If you finish before the class time is up. Decide on your next pattern.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 9 ☐ 20m Handicrafts - Lesson 21

Red Work- Red Work Project #2

☐ Materials: red embroidery thread, white or cream fabric, needles, red work pattern templates, pattern pen or pencil, scissors, embroidery hoop

PREP: Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

→ PRACTICE

- Begin your second red work project.
- Look through the patterns online. Decide which pattern you will begin with.
- Cut your fabric large enough to stretch over your embroidery hoop. Alternatively, you could do this project on a pillow case or a dish towel.
- Trace your red work pattern onto the center of your fabric.
- Stretch your fabric over your hoop.
- Thread your needle with string.
- Use the outline stitches to work on your pattern. More interest is added in your work when you vary your outline stitches.
- Store your needle in the fabric outside of the hoop. You are ready to begin working next lesson.
- Clean up your work area as your teacher has instructed.

How is your work going so far? Are you investing effort into your craftsmanship?

Term 2

WEEK 10 20m Handicrafts - Lesson 22

Red Work- Finish Red Work Project #2

Materials: red embroidery thread, white or cream fabric, needles, red work pattern templates, pattern pen or pencil, scissors, embroidery hoop

PREP: Gather all necessary supplies.

→ NOTE

Students will be working on an embroidery hoop. They may need help at first figuring out how much fabric they will need to stretch across their hoop.

→ PRACTICE

- Finish stitching your red work pattern. Replenish your thread as needed.
- Clean up your work area as your teacher has instructed.
- If you finish before the class time is up. Decide on your next pattern.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 11 20m Handicrafts - Lesson 23

Sashiko & Red Work- Catch Up Day

Materials: The Ultimate Sashiko Sourcebook by Susan Briscoe, white sashiko thread, chambray fabric, sashiko needles, sashiko pattern templates, pattern pen or pencil, scissors, embroidery hoop, red embroidery thread, white or cream fabric

PREP: Gather all necessary supplies.

→ PRACTICE

- Spend this class time catching up and finishing any sashiko or red work projects you have not yet completed.
- These techniques are great ways to enhance everyday objects and to bless others with gifts.
- Clean up your work area as your teacher has instructed.

How is your work going so far? Are you investing effort into your craftsmanship?

WEEK 12 20m Handicrafts - Lesson 24

Exam Week

→ EXAMS

Answer question(s) related to the course.

Questions will come from:
Handicrafts: Sashiko & Red Work

Term 3

WEEK 1 ☐ 20m Handicrafts - Lesson 25

Cloisonne - Introduction to Cloisonne

☐ Materials: cardstock or cardboard, pencil, 1mm flat wire, tweezers, wire clippers, small ziplock bag or container (for holding clipped wires in)

PREP: Teachers should watch the intro tutorial before the term begins.

- ∞ Video Link: Cloisonne Supplies
 - ∞ Video Link: Washing Sand Before Beginning
 - ∞ Video Link: How to Fill a Cloisonne Form
- Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video.

- ∞ Video Link: Practicing Cloisonne
- Draw various lines and shapes on your cardstock/cardboard like what you saw in the tutorial. Make large lines and small lines, large shapes and small shapes.
- Fit the 1mm flat wire to the lines you have drawn by bending and clipping it.
- Continue until you have copied all of your lines with wire.
- Place the clipped and shaped wires into a ziplock bag or small container for next class. Save your cardstock/cardboard for next class as well.
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 2 ☐ 20m Handicrafts - Lesson 26

Cloisonne - Gluing in Cloisonne

☐ Materials: cardstock or cardboard, pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video. Skip through drawing lines and bending wire to get to the gluing part of practice.

- ∞ Video Link: Practicing Cloisonne
- Trace the lines you drew last class on your cardstock/cardboard with glue.
- Allow those lines to dry for about five minutes.
- Fit the 1mm flat wire that you previously bent to the glue lines that match.
- Continue until you have copied all of your lines with wire.
- If you could not finish during the class time, place the clipped and shaped wires into a ziplock bag or small container for next class. Save your cardstock/cardboard for next class as well.
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

Term 3

WEEK 3 ☐ 20m Handicrafts - Lesson 27

Cloisonne - Cloisonne Ornament

☐ Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, flat wood pieces, palette knife

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Cloisonne Ornament

- Draw a snowman, Christmas tree or other simple object on your flat, wood piece. Add some detail lines.
- Fit the 1mm flat wire to the lines you have drawn by bending and clipping it. Set aside.
- Continue until you have copied all of your lines with wire.
- Trace the lines with glue and allow it to dry for a few minutes.
- Place your pre-cut wires onto your glue lines and set aside to dry. Your project must dry at this stage for 2-24 hours. It is best to leave the remaining work for the next class.
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 4 ☐ 20m Handicrafts - Lesson 28

Cloisonne - Cloisonne Ornament

☐ Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, flat wood pieces, palette knife, Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Cloisonne Ornament

- Decide on the colors of sand you will use to fill your object with.
- Put a small amount of each color into its own mini cup.
- Wash the sand in each cup just like was demonstrated in the tutorial.
- Use your palette knife or dropper to fill each space on your object with your chosen color. A little goes a long way. Do not fill the space to the top of the wire but be sure it is well under the top of the wire.
- Use the spray bottle to mist the sand with water on your design if you are struggling to make the sand move. Dry sand=little movement/ wet sand= much movement. (The water will evaporate but you don't want so much water that it is overflowing.)
- When you have finished adding color, allow your design to dry for 30 minutes.
- After 30 minutes, spray your design with the pigment fixing glue. Cover the entire design well.

Term 3

- Allow to dry for 24-48 hours and then spray with acrylic fixative. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 5 20m Handicrafts - Lesson 29

Cloisonne - Cloisonne Ornament #2

Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, flat wood pieces, palette knife

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video again if necessary.

∞ Video Link: Cloisonne Ornament

- Draw a different simple object on your flat, wood piece. Add some detail lines.
- Fit the 1mm flat wire to the lines you have drawn by bending and clipping it. Set aside.
- Continue until you have copied all of your lines with wire.
- Trace the lines with glue and allow it to dry for a few minutes.
- Place your pre-cut wires onto your glue lines and set aside to dry. Your project must dry at this stage for 2-24 hours. It is best to leave the remaining work for the next class.
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 6 20m Handicrafts - Lesson 30

Cloisonne - Cloisonne Ornament #2

Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, flat wood pieces, palette knife, Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video again if necessary.

∞ Video Link: Cloisonne Ornament

- Decide on the colors of sand you will use to fill your object with.
- Put a small amount of each color into its own mini cup.
- Wash the sand in each cup just like was demonstrated in the tutorial.
- Use your palette knife or dropper to fill each space on your object with your chosen color. A little goes a long way. Do not fill the space to the top of the wire but be sure it is well under the top of the wire.
- Use the spray bottle to mist the sand with water on your design if you are struggling to make the sand move. Dry sand=little movement/ wet

Term 3

sand= much movement. (The water will evaporate but you don't want so much water that it is overflowing.)

- When you have finished adding color, allow your design to dry for 30 minutes.
- After 30 minutes, spray your design with the pigment fixing glue. Cover the entire design well.
- Allow to dry for 24-48 hours and then spray with acrylic fixative. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 7 20m Handicrafts - Lesson 31

Cloisonne - Cloisonne Flowering Branch on Tray

Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, wood tray, palette knife

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Cloisonne Branched Flower

- Draw a flowering branch on your wood tray. Add some detail lines.
- Fit the 1mm flat wire to the lines you have drawn by bending and clipping it. Set aside.
- Continue until you have copied all of your lines with wire.
- Trace the lines with glue and allow it to dry for a few minutes.
- Place your pre-cut wires onto your glue lines and set aside to dry. Your project must dry at this stage for 2-24 hours. It is best to leave the remaining work for the next class.
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 8 20m Handicrafts - Lesson 32

Cloisonne - Cloisonne Flowering Branch on Tray

Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, wood tray, palette knife, Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Cloisonne Branched Flower

- Decide on the colors of sand you will use to fill your object with.
- Put a small amount of each color into its own mini cup.
- Wash the sand in each cup just like was demonstrated in the tutorial.

Term 3

- Use your palette knife or dropper to fill each space on your object with your chosen color. A little goes a long way. Do not fill the space to the top of the wire but be sure it is well under the top of the wire.
- Use the spray bottle to mist the sand with water on your design if you are struggling to make the sand move. Dry sand=little movement/ wet sand= much movement. (The water will evaporate but you don't want so much water that it is overflowing.)
- When you have finished adding color, allow your design to dry for 30 minutes.
- After 30 minutes, spray your design with the pigment fixing glue. Cover the entire design well.
- Allow to dry for 24-48 hours and then spray with acrylic fixative. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 9 20m Handicrafts - Lesson 33

Cloisonne - Landscape on Tray

 Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, wood tray, palette knife, Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Cloisonne Landscape

- Draw a different simple object on your flat, wood piece. Add some detail lines.
- Fit the 1mm flat wire to the lines you have drawn by bending and clipping it. Set aside.
- Continue until you have copied all of your lines with wire.
- Trace the lines with glue and allow it to dry for a few minutes.
- Place your pre-cut wires onto your glue lines and set aside to dry. Your project must dry at this stage for 2-24 hours. It is best to leave the remaining work for the next class.
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 10 20m Handicrafts - Lesson 34

Cloisonne - Landscape on Tray

 Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, wood tray, palette knife, Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

Term 3

→ PRACTICE

Watch the tutorial video.

∞ Video Link: Cloisonne Landscape

- Decide on the colors of sand you will use to fill your object with.
- Put a small amount of each color into its own mini cup.
- Wash the sand in each cup just like was demonstrated in the tutorial.
- Use your palette knife or dropper to fill each space on your object with your chosen color. A little goes a long way. Do not fill the space to the top of the wire but be sure it is well under the top of the wire.
- Use the spray bottle to mist the sand with water on your design if you are struggling to make the sand move. Dry sand=little movement/ wet sand= much movement. (The water will evaporate but you don't want so much water that it is overflowing.)
- When you have finished adding color, allow your design to dry for 30 minutes.
- After 30 minutes, spray your design with the pigment fixing glue. Cover the entire design well.
- Allow to dry for 24-48 hours and then spray with acrylic fixative. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 11 □ 20m Handicrafts - Lesson 35

Cloisonne - Cloisonne Catch Up Day

□ Materials: pencil, 1mm flat wire, tweezers, wire clippers, B-7000 glue, colorful sand, droppers, mini cups, 2 water containers with water, pigment fixing glue, mini spray bottle, wood tray, palette knife, Krylon Triple Thick Acrylic Glaze

PREP: Gather all necessary supplies.

→ NOTE

Some students will need hands on help until they gain control of bending the wire and using the wire clippers.

→ PRACTICE

- Use this class time to catch up on any projects you were unable to finish. Don't forget to spray all of your projects with an acrylic satin fixative afterwards. (Spray outside in fresh air and leave outside for several hours to get rid of fumes.)
- Clean up your work area as your teacher has instructed.

How is your project going so far? Are you investing effort into your craftsmanship?

WEEK 12 □ 20m Handicrafts - Lesson 36

Exam Week

→ EXAMS

Answer question(s) related to the course.

Questions will come from:
