The Slave Auction, A Letter from a Schoolboy

Materials: William Wilberforce: The Freedom Fighter

→ INTRO

This book is about an Englishman named William Wilberforce (1759-1833) who was a member of Parliament, the lawmaking group in the government of Great Britain. The English had been part of the slave trade since 1662. In 1770, out of a total of one hundred thousand slaves a year from West Africa, British ships transported more than half. English considered the slave trade inseparably linked with the wealth and national security of Great Britain. William worked tirelessly in Parliament to change the laws and abolish or get rid of the slave trade. As we learn about this remarkable man, we will also learn about what life was like in the late 1700s and early 1800s, what people were thinking or talking about, and how it was different from our lives today. We are mostly studying 1800-1900 this year, but this book begins a little earlier in 1759, when William was born.

what do they mean? It usually means they want to get involved in government. It is important to know a little about the government of the United Kingdom (England, Scotland, Wales and Northern Ireland) since our book takes place in England. Parliament is the **legislature** or lawmaking group. The government leader, called the prime minister, is always a member of Parliament. This makes Britain different from the United States, which keeps **Congress** and the president in separate branches of government. Parliament is made up of two houses: the House of Lords and the House of Commons. You will read about William's entrance into public service.

However, in the 1840s, tragedy struck Ireland that changed it forever. There was a terrible famine, and many people either died or left the country to go to America. Today, one-sixth of US citizens (43 million) identify their national background as Irish. What was it like to live in Ireland at this time? This book is a fictional account of an Irish family during that time and what they did to survive. It is hard to read about such a sad time in history and all the suffering that happened, but we also read about those who persevered and had hope for a brighter future. Here is a little more background information about the potato disease or blight. "Almost overnight, healthy green fields of potatoes turned black. Prior to the blight, many Irish families relied on potatoes as their primary food source. The average man ate 14 pounds of potatoes a day. Mixed with buttermilk, potatoes provided a nutritious diet for hard-working laborers. Ireland was unprepared for the recurring failure of the potato crop in the years 1845–1849. As it turned out, the crop failure was due to a fungus that was unknown at the time, which is now believed to have been *Phytophthora infestans*. Approximately 40 percent of the crop was lost in 1845; however, it did not lead to famine, as surplus from the previous year sustained the population along with some government relief. The next year's harvest was expected to be healthy and plentiful. However, in 1846, the blight returned to the potato crop in Ireland, and relief from the government in England was slow and inadequate. Soon disease and death spread across the country" (From Great Hunger Museum).

The potato plant grows underground. Potatoes are grown by planting seed potatoes—sprouted chunks of old potatoes—which form multiple new tubers underground, typically five to six per seed piece. Workhouses were built by the government before the famine as places of refuge for those who were unable to support themselves, often due to extreme poverty. A typical day inside a workhouse was to rise at 6 am, breakfast at 6.30 am, work until 12 noon, lunch break, and then work until 6 pm. Supper was served at 7 pm, with lights out at 8 pm. Husbands, wives, and children were separated as they entered the workhouse and could be punished if they attempted to speak to each other. An inmate's only possessions were his/her uniform, mattress, and blanket. Once a week, the inmates bathed, and the men shaved. The conditions were unsanitary, and the conditions were harsh because they didn't want people to go to the workhouses unless it was the last resort. History is complicated, and it is hard to simplify all the conflict that existed between Protestant England and Catholic Ireland at the time. The Acts of Union in 1800 that created the United Kingdom had declared that Ireland, a predominantly Catholic country, would be directly under British rule. Many farms in Ireland were owned by English absentee landlords. The Irish were, in effect, second-class citizens in their own country. You may be wondering why the Irish were so dependent on the potato and why they didn't have other crops. "Potatoes are not native to Ireland but likely originated in the Andes Mountains of Peru, South America. In the early 1500s, Spanish conquerors found the Incas growing the vegetable, which the Spanish called patata. They were taken back to Europe and eventually reached England, where the name changed to potato. About 1590, potatoes were introduced to Ireland, where farmers quickly discovered they thrived in their country's cool, moist soil with very little labor. An acre of fertilized potato field could yield up to 12 tons of potatoes, enough to feed a family of six for a year, with leftovers going to the family's animals. By the 1800s, the potato had become the staple crop in the poorest regions. More than three million Irish peasants subsisted solely on the vegetable, which is rich in protein, carbohydrates, minerals, and vitamins such as riboflavin, niacin, and Vitamin C. Irish peasants were actually healthier than peasants in England or Europe, where bread, far less nutritious, was the staple food" (from historyplace.com). Although the potato crop failed, some farmers in Ireland were still growing wheat, oats, barley, and other crops that were exported to England. That is why many Irish people blamed England for not helping them as much as they could have. You will read more about that in today's reading.

The Poor Law Extension Act, which made landlords responsible for the maintenance of their own poor, urged the landlords to pay for their tenants to leave the country. However, emigrating was not an easy solution. Ships were overcrowded, and many people died before reaching their new home. Disease spread quickly on board because people were packed in so close together. These ships became known as "coffin ships" because so many people died aboard them.

WEEK 4 25m World History: Grades 4-6 - Lesson 28

The Dutch Island Prison, Foreigners Forbidden

Materials: Commodore Perry in the Land of the Shogun

→ RECAP

What did you read last time?

→ INTRO

The only Western country that had been allowed to trade with Japan was the Netherlands, which began trade in 1608. The Dutch traders were confined to an artificial island and had many rules to follow. You will read about that in this chapter. Then the next chapter will explain why the Japanese were cut off from the rest of the world and how it had not always been that way.
